

Remanufactured Lift Truck Parts

Remanufactured Lift Truck Parts - Forklifts are really expensive pieces of equipment. A five thousand pound new electric model could cost between \$18,000 to \$25,000 and several thousands of dollars more would be needed for a battery and a battery charger. The same internal combustion lift truck of similar lift capacity would cost a little less and the diesel units that are capable of heavier lifting capacities could cost upwards of one hundred thousand dollars. Reconditioned forklifts are a choice so as to save much cash as they cost less than half the price of new units.

Several purchasers may be apprehensive about acquiring a used or reconditioned forklift because they feel they will have to spend more on upkeep. However, a properly reconditioned forklift will be able to perform just as well as a new one. Even if your lift will get heavy use, so long as you take proper care of the machine, it would serve all your needs and possibly save you a lot of cash.

When thinking about obtaining a second-hand forklift, it is essential to ascertain what the seller means by the term refurbished or reconditioned. Lots of companies do an excellent job of entirely making over the model before reselling it. This comprises disassembling the forklift, rebuilding the engine, sandblasting the lift and next reassembling everything and finishing with a fresh coat of paint.

To meticulously rebuild a lift truck engine, a good company will firstly completely disassemble it. A heat cleaning system is then used to clean all of the components. Once this step has been done, all of the parts are checked to see if they have any defects, any breakage or any extensive wear. Some components like for example crankshafts, cylinder blocks, connecting rods and cylinder heads are resurfaced, resized and reground if necessary. Various parts like nuts, bolts, gears and so forth. are replaced or repaired as needed.

Once the overhaul has been completed, the engine is rebuilt by hand. After being put back together, a series of tests are applied to the working machinery in order to check all of the components and make certain there are no leaks or issues. If any problems occur, the crucial changes are made.

There must be no reason to be apprehensive about obtaining a refurbished or reconditioned forklift from quality sellers. The process of rebuilding the equipment ensures the utmost in reliability. Maintenance expenses can actually work out to be less because you will avoid the initial phase of higher maintenance projections which a new lift truck has as it is broken in. By following routine maintenance schedules and taking care of the machine correctly, a reconditioned lift truck would serve you well.
